<b>(54) Title:</b> METHODS AND COMPOSITIONS FOR IDENTIFYING VARIATIONS IN HUMAN $\alpha_{1B}$ - AND $\beta_2$ -ADRENERGIC RECEPTOR GENES  <b>(57) Abstract</b>  The present invention provides compositions and methods for a rapid and specific amplification of large segments of the coding sequence of the human $\beta_2$ -adrenergic receptor gene and the human $\alpha_{1B}$ -adrenergic receptor gene. The invention also provides means for identifying genetic alterations in these receptors that were previously not amenable to routine and automated genetic analysis. Furthermore, the invention provides a simple and inexpensive method for diagnosing diseases based on the genetic alterations in these receptors.
